HTML

- Enter your HTML notes here
- The head element contains information about the webpage
- The body element represents the visible content to the user
- This is a refresher course

CSS

- A margin indicates how much space we want around the outside of an element
- A padding indicates how much space we want around the content inside an element

Git

- git status: checks what branch we are currently on
- git checkout -b branch name: creates a new branch and switches to it
- git add -A: adds modification in the current working branch to the staging area (-A means add all changes)
- git commit -m "your message here": takes a snapshot of the currently staged changes
- git pull origin main: syncs local branch with the remote base branch
- git push origin branch name: pushes the changes we have locally to our remote github branch

Javascript

- A variable is a named container that allows us to store data in our code.
- Control flow is the order in which a computer executes code in a script.

I can code!
